

## BUGS

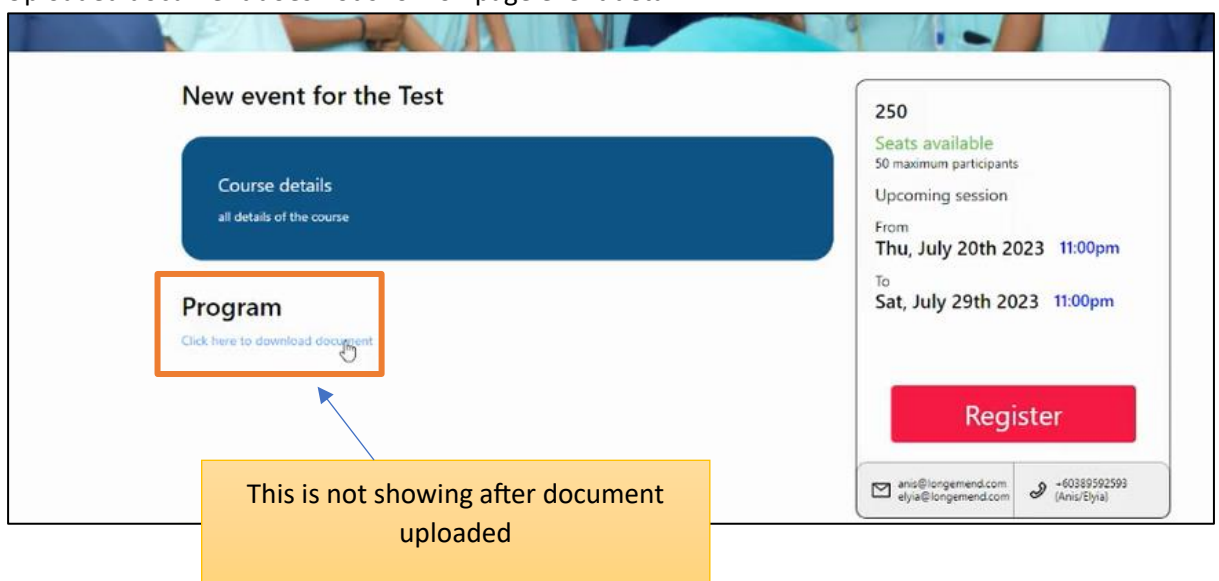

1. Don't show create event button

2. Upcoming event shows on the past event

3. Uploaded document does not show on page event detail

4. The event image still distorted. Before this, we had discussed about this bug.

2. the content is not displayed in full width when the window is maximized,

## Admin Dashboard

### 1. Admin Profile Page

Should have these functions:

- a) Edit Password

### 2. All users page

i) Should have these functions:

a) **Edit User details** (each field should be editable). Preferably, the admin should be able to click on any detail in the Users table and edit it directly, but if you prefer having another column specifically for editing user details, that is fine too.

b) **"Remove User"** at the end of the table.

c) **Export Users table to .csv file**

d) Users table should be scrollable both horizontally and vertically to accommodate future users. Horizontally to view all the columns of the table, and vertically to be able to view more users.

### 3. All Event Page

Should have these functions:

a) **View ALL Events** in a list. (The hierarchy of the list should be arranged in which Event is the latest, will be at the top)

b) Have a **delete icon** on each event, when clicked, will prompt the admin if they are sure they would like to delete the event. Once confirmed, the event should be deleted. / placed in a "Deleted" list, able to recover the deleted event in the possibility that the admin might've made a mistake

c) When clicking on any of the Events' TITLE, should bring the admin to the page seen on the right, the "Event Details" page.

d) **Edit Event Details** - admins should be able to Edit Event Details and bring them to the "Edit Event Details" page as shown below to edit the event details.

### 4. For payment tab, need to list of user registered event and download in excel

- i) Event registered
- ii) Date and time
- iii) Place
- iv) Price
- v) Full name
- vi) Email
- vii) Telephone number
- viii) Institution/organization
- ix) department
- x) Practicing number
